Configuração Jenkins

Instalação Jenkins: https://blog.tiagopariz.com/jenkins-instalar-no-windows/

- 1. Nuget: Baixar pacote/dependências do projeto
 - https://www.nuget.org/downloads
- 2. MsBuild: Compilar o projeto de testes
 - https://www.microsoft.com/en-us/download/details.aspx?id=48159
- 3. Nunit3Console: Executar os testes
 - https://nunit.org/download/

Criar build

Novo job -> Construir um projeto de software free-style

- 1. Geral
 - a. Selecionar GitHub Project
 - i. GitHub Project
 - 1. Adicionar o valor -> https://github.com/Erika05/DesafioAPI.git/
- 2. Gerenciamento de código fonte
 - a. Selecionar Git
 - i. Repositories
 - Adicionar repositor URL-> https://github.com/Erika05/DesafioAPI.git
 - ii. Branches to build
 - 1. Adicionar branch-> */master
- 3. Trigger de builds
 - a. Selecionar Consultar periodicamente o SCM.
- 4. Ambiente de build
 - a. Selecionar Delete workspace before build starts
- 5. Build
 - a. Adicionar passo na build para executar no comando Windows:

- i. "C:\\Program Files (x86)\\NuGet\\nuget.exe" restore"C:\Users\erika\\Documents\GitHub\DesafioAPI\DesafioAPI.sln"
- ii. "C:\\Program Files (x86)\\Microsoft Visual Studio\\2017\\Community\\MSBuild\\15.0\\Bin\\MSBuild.exe" /t:Clean,Build /p:Configuration=Debug "C:\Users\erika\Documents\GitHub\DesafioAPI\DesafioAPI.sln"
- iii. cd C:\\Users\\erika\\Documents\\GitHub\\DesafioAPI\\RestSharpTemplate\\ bin\\Debug
 - "C:\Program Files (x86)\NUnit.Console-3.11.1\bin\net35\nunit3-console.exe" "DesafioAPI.dll" --inprocess --labels=On
